Statistics

I EXECUTIVE SUMMARY

Population projections have been prepared for the 8 Economic Regions of Manitoba during the period 1988 - 2011. These projections are compatible with the Manitoba level projections released by the Manitoba Bureau of Statistics in March of this year.

Under these regional populations projections, the 8 regions can be placed into 3 groups based upon population change between 1986 and 2011 (population up, population down and population relatively unchanged).

The 5 regions Southeast, South Central, Winnipeg, Interlake and Parklands are projected to have increasing populations throughout the projection period.

The populations of both the Southwest and North are projected to decrease between the present and 2011.

For the Southwest, the population drop of 4,200 (from 108,900 in 1986 to 104,700 in 2011) is due to a projected interprovincial migration outflow of 12,860 and an intraprovincial migration outflow of 2,170 for the projection period. This outflow is only slightly offset by a projected natural increase (births minus deaths) of 8,640 and an international migration inflow of 1,970.

For the North, the population loss of 8,600 (from 78,000 in 1986 to 69,400 in 2011) is due to a projected interprovincial migration outflow of 20,080 and a projected intraprovincial migration outflow of 18,850. These migration outflows are partially offset by a projected natural increase of 29,100 and an international migration inflow of 1,010.

The North Central region is projected to have minor population changes, increasing in population by 200 in the first 5 years, decreasing by 200 in the next 5 years and then increasing 500 persons by the year 2011.

Winnipeg will have the largest projected overall population increase at 81,100 (a 13.6% increase over the 1986 population of 594,600).

The Southeast will have the largest projected percentage population increase at 33.2%, based on a projected increase of 24,200 above the 1986 population of 72,900.

II INTRODUCTION

This report presents population projections for the 8 Manitoba Economic Regions during the period 1988 - 2011. The 8 Economic Regions (also known as Official Regions for Data Collection) are aggregations of the 23 census divisions as follows:

ECONOMIC REGION	CENSUS DIVISIONS	1986 BASE POPULATION
Southeast	1, 2, 12	72,900
South Central	3, 4	49,900
Southwest	5, 6, 7, 15	108,900
North Central	8, 9, 10	46,200
Winnipeg	11	594,600
Interlake	13, 14, 18	70,300
Parklands	16, 17, 20	50,500
North	19, 21, 22, 23	78,000
	TOTAL	1,071,200

These regional projections are compatible with the Manitoba level population projections released by the Manitoba Bureau of Statistics in March, 1989. The base population for these projections is the Statistics Canada 1986 Census figure (adjusted for unenumerated Indian Reserves) of 1,071,200 for Manitoba distributed on a regional basis.

Projections are not forecasts but are based on what would occur if the stated assumptions hold true. As the process of change is cumulative, the reliability of the projections decreases over time.

Population projections can be prepared for departments' and agencies' user-defined areas, departmental regions or special sub-populations on a cost-recovery basis.

To obtain further information on this report or to order custom projections, please contact David Greenwood at (204) 945-2989.

III PROJECTED REGIONAL POPULATIONS: 1988 - 2011

Table 1 illustrates the annual projected population for Manitoba and its Economic Regions over the period 1988 - 2011. During this time, the population of Manitoba is projected to increase by 118,600 (11.1%).

Based on the projected population changes, the 8 regions fall into three groups.

The 5 regions in the first group (Southeast, South Central, Winnipeg, Interlake and Parklands) are all projected to increase in population throughout the projection period.

The Southeast, Winnipeg and Interlake are also projected to increase their proportion of Manitoba's population (as shown in Appendix C). The Southeast's share is to increase by 1.35 percentage points (from 6.81% to 8.16%) while Winnipeg's share is increasing 1.31 points (from 55.48% to 56.79%) and the Interlake's share is projected to increase by 0.76 points in the next 25 years.

However, the Parklands' share of Manitoba's population will show a small decline, from 4.72% of Manitoba's population in 1986 down to 4.48% by the year 2011. For the South Central, it's share is projected to decrease from 4.66% in 1986 to 4.61% during the mid-1990's before increasing to 4.70% by 2011.

The 2 regions in the second group (Southwest and North) are both projected to have a population decline for the next quarter century. The population of the Southwest is projected to fall 4,200 (3.9% of the 1986 base population of 108,900) while the population of the North is projected to decline 8,600 (11.0% of the 1986 population of 78,000).

Both of these regions are also projected to have a declining share of Manitoba's population with the Southwest's share falling to 8.80% in 2011 from 10.17% in 1986 while the North's share is to fall to 5.83% from 7.28% during the same time period.

The North Central is the only region in the third group (population relatively unchanged). From a 1986 base of 46,200, the population is projected to grow to 46,400 during the early 1990's, decline slightly back to 46,200 for the late 1990's and early 2000's before increasing to 46,700 by the year 2011.

During this time period, the North Central's share of Manitoba's population is projected to fall slowly to 3.92% in 2011 from a value of 4.31% in 1986.

Details of the projected regional populations are presented in Appendix A - D.

IV i) BIRTHS

This section presents the projected births for the 8 Economic Regions to the end of the projection period. For projection purposes, the number of births is determined by the mean age of fertility, modal age of fertility and the total fertility rate.

The mean age of fertility and the modal age of fertility have little effect on the number of births in the model used so these factors are assumed to remain constant at the 1986 values for the entire projection period.

The total fertility rate has the greatest impact on the number of projected births for each region. This factor is also assumed to remain constant at the 1986 level for each region and is shown in Table 3 below.

With these assumptions, the projected number of births is solely determined from the number of females in each of the 5 year age categories between 15 and 49 years of age.

TABLE 3: TOTAL FERTILITY RATES BY REGION

	OBSERVED			PROJECTED	
REGION	1976	1981	1986	1996	2011
Southeast	2.62	2.25	2.21	2.21	2.21
South Central	2.59	2.51	2.26	2.26	2.26
Southwest	2.19	2.03	1.90	1.90	1.90
North Central	2.41	2.24	2.21	2.21	2.21
Winnipeg	1.70	1.58	1.67	1.67	1.67
Interlake	2.17	1.85	2.00	2.00	2.00
Parklands	2.49	2.28	2.40	2.40	2.40
North	3.17	2.89	2.61	2.61	2.61
Manitoba	2.02	1.86	1.89	1.89	1.89

The Southeast will have a marked increase in the projected number of births, increasing by 250 or 20.5% over the 1986 level of 1,220. This is in comparison to Manitoba which is projected to have a drop of 15.1% during the next quarter century.

The Southwest with 1,260, Winnipeg with 7,260 and the North with 1,380 are all projected to have a lower number of births by the year 2010. These represent decreases of 21.7%, 22.9% and 23.3% respectively from the 1986 levels.

The four other regions are projected to have moderate changes in the number of births with South Central and North Central having a slight decrease and Interlake and Parklands having slight increases.

ii) DEATHS

This section presents the projected number of deaths for each of the Economic Regions. For projection purposes, the number of deaths is determined by the life expectancy at birth for each region. Details of the regional life expectancies by sex are presented in Appendix E.

During the next 25 years, the life expectancy at birth is projected to increase approximately 4 years for each region with the largest increase of 4.5 years occurring in North males. The lowest increase of 3.7 years is assumed to occur in South Central males.

Table 5: LIFE EXPECTANCY AT BIRTH BY REGION (In Years)

	FEMALE			MALE		
REGION	1986	1996	2011	1986	1996	2011
Southeast	80.4	82.2	84.9	75.2	76.7	79.4
South Central	81.2	82.7	85.0	76.1	77.5	79.8
Southwest	80.7	82.2	84.5	73.5	75.2	77.7
North Central	79.7	81.2	83.5	73.8	75.5	78.0
Winnipeg	79.4	81.0	83.5	72.8	74.6	77.2
Interlake	80.6	82.4	85.0	73.7	75.5	78.3
Parklands	78.9	80.5	82.9	71.7	73.7	76.6
North	77.5	79.6	82.7	69.2	71.4	74.7
Manitoba	80.0	81.5	83.8	73.4	75.0	77.5

For Manitoba, the number of deaths is projected to increase by 1,400 (15.9%) to the year 2010. In contrast, the number of deaths in the Parklands is projected to decrease by 50 (8.6%) during the same period. All of this drop is projected to occur during the last 10 years of the projection period.

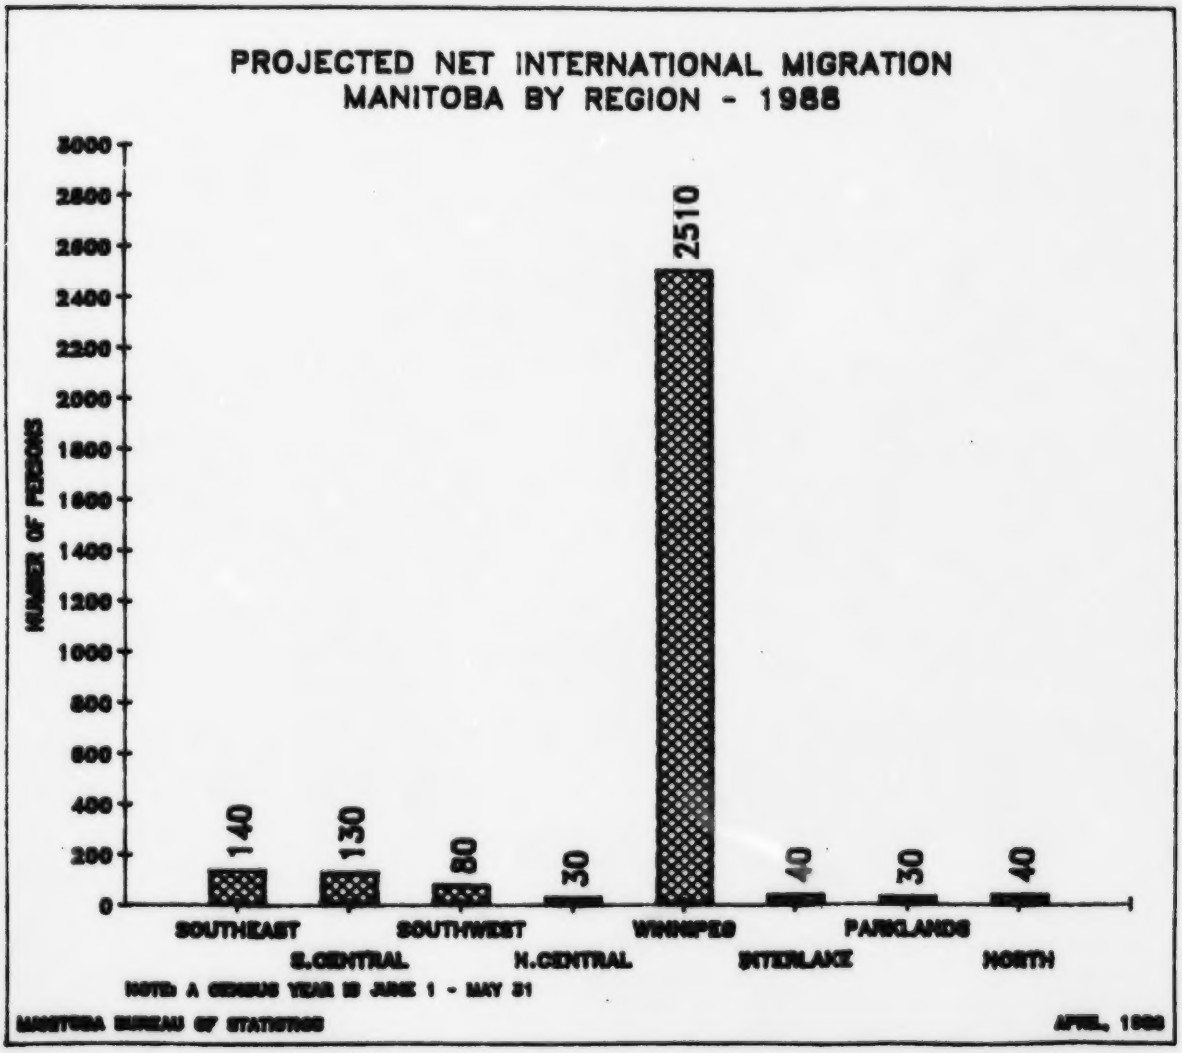
The number of deaths is projected to increase for Winnipeg (up 19.4%), Southeast (19.3%) and Interlake (14.3%).

In the four other regions, there will be relatively no change in the projected number of deaths over the projection period. For the North, there will be a minor decrease in the number of deaths in the middle of the period.

For the South Central, Southwest and North Central regions, there will be a slight increase for the first half of the projection period before declining slightly during the second half of the period.

TABLE 6. PROJECTED REGIONAL INTERNATIONAL MIGRATION 1986 - 2011

CENSUS YEAR	SOUTH EAST	SOUTH CENTRAL	SOUTH WEST	NORTH CENTRAL	WINNIPEG	INTERLAKE	PARKLANDS	NORTH	MANITOBA
1986	140	210	0	-10	2,170	0	-10	30	2,500
1987	160	130	130	40	2,750	50	40	60	3,000
1988	140	130	80	30	2,510	40	30	40	3,000
	↓	↓	↓	↓	↓	↓	↓	↓	↓
2010	140	130	80	30	2,510	40	30	40	3,000



MIGRATION SCENARIOS

As the most volatile component of population growth, migration has the greatest impact on the year-to-year change in the population of Manitoba's regions.

For these regional projections, the migration scenarios have been developed using the in and out flows for each of the three components: international, interprovincial and intraprovincial. However, in this report only the net figure is presented for each migration component.

The data presented for 1986 are estimates of the regional migration distributions while the data for the remaining 24 years have been projected from the historical percentage distribution for each region.

iii) INTERNATIONAL MIGRATION

TABLE 7: NET INTERNATIONAL MIGRATION BY REGION 1979 TO 1986

REGION	8 YEAR AVERAGE (1979 TO 1986)	DISTRIBUTION OF 8 YEAR AVERAGE (%)	DISTRIBUTION FOR 1986 (%)
Southeast	152	4.7%	5.6%
South Central	133	4.1	8.1
Southwest	115	3.5	0.1
North Central	37	1.1	- 0.2
Winnipeg	2,685	82.5	85.4
Interlake	45	1.4	0.0
Parklands	34	1.0	- 0.3
North	55	1.7	1.3
Manitoba	3,256	100.0%	100.0%

As shown in Table 7, the majority of international migrants to Manitoba in the last 8 years have moved to Winnipeg. This dominance is projected to continue as shown in Table 6.

Although a small component of population growth for the other regions, it is projected that all regions will have positive international migration throughout the projection period.

The only exceptions to this positive trend were for the North Central and Parklands during 1986. For that year, these regions had an international migration out flow of -10 persons each.

TABLE 8 PROJECTED REGIONAL INTERPROVINCIAL MIGRATION: 1986 - 2011

APRIL, 1989

iv) INTERPROVINCIAL MIGRATION

Interprovincial migration is the most volatile component of the three migration types and can have the greatest impact on the year-to-year change in the populations of Manitoba's regions.

Table 9 shows the recent distribution of net interprovincial migration by region for the period 1979 to 1986. As can be seen, each region lost population due to interprovincial migration during this time period.

TABLE 9: NET INTERPROVINCIAL MIGRATION BY REGION 1979 TO 1986

REGION	8 YEAR AVERAGE (1979 TO 1986)	DISTRIBUTION OF 8 YEAR AVERAGE (%)	DISTRIBUTION FOR 1986 (%)
Southeast	- 142	- 3.9%	- 8.8%
South Central	- 66	- 1.8	- 0.9
Southwest	- 429	- 11.8	- 18.0
North Central	- 115	- 3.2	0.8
Winnipeg	- 2,018	- 55.7	- 39.1
Interlake	- 91	- 2.5	- 8.5
Parklands	- 55	- 1.5	5.0
North	- 709	- 19.6	- 30.5
Manitoba	- 3,625	100.0%	100.0%

This population loss to interprovincial migration is projected to continue throughout the projection period. However, due to the ageing of the population and a decreased propensity to migrate, the net interprovincial migration is projected to moderate from the level of -6,300 in 1987 to -2,500 by the year 2010.

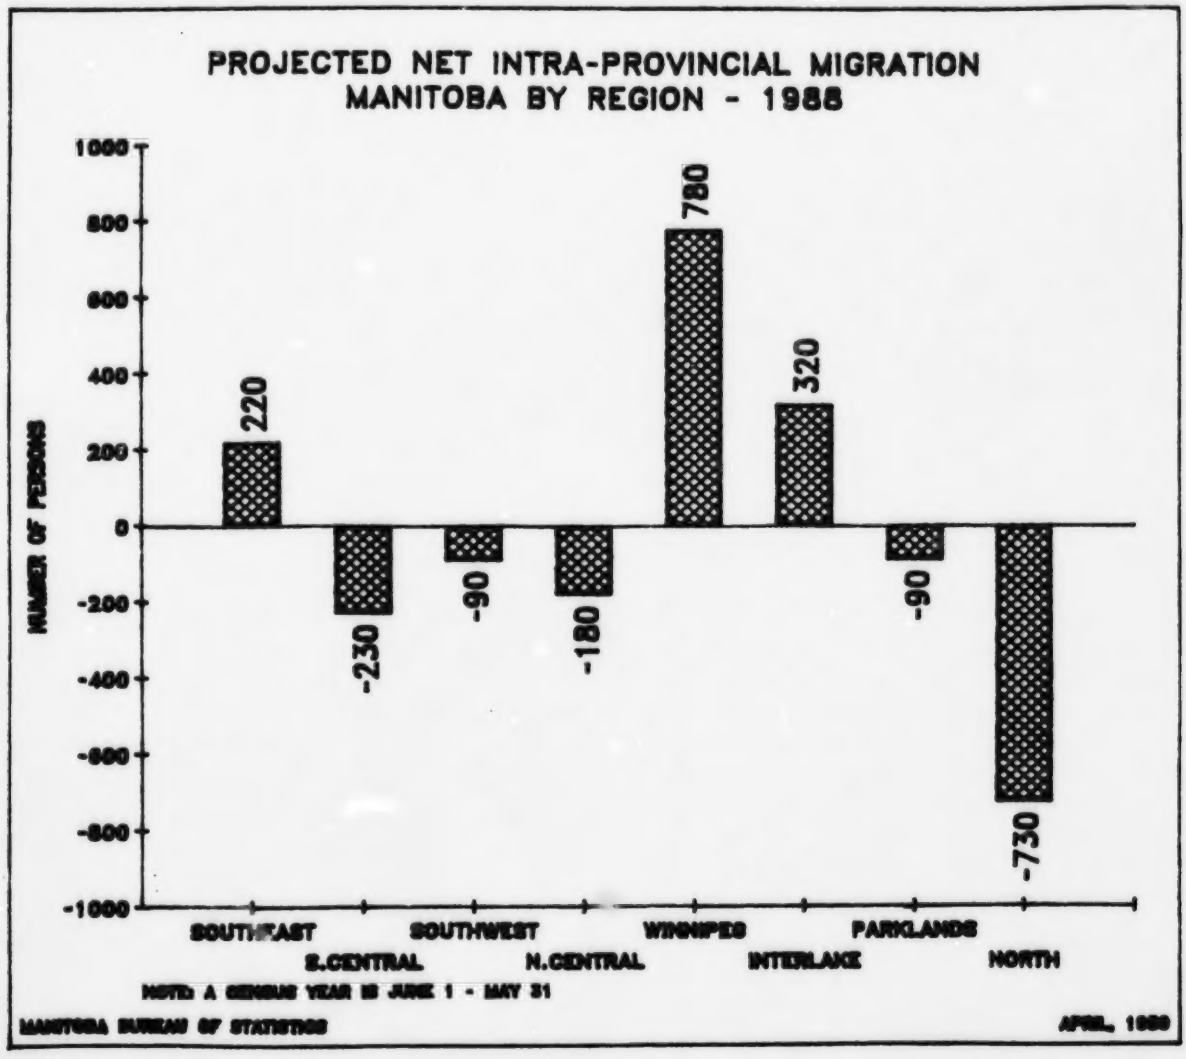
Winnipeg will have the largest projected population loss at -3,640 for 1987, moderating to -1,400 by the year 2010.

The North is also projected to have a large out flow of -1,050 in 1987, moderating to -480 by the year 2010.

The Parklands, South Central and Interlake are projected to have moderate out flows, declining to -40, -50 and -60 respectively by 2010.

TABLE 10 PROJECTED REGIONAL INTRAPROVINCIAL MIGRATION: 1986 - 2011

CENSUS YEAR	SOUTH EAST	SOUTH CENTRAL	SOUTH WEST	NORTH CENTRAL	WINNIPEG	INTERLAKE	PARKLANDS	NORTH	MANITOBA
1986	940	-230	-10	-310	440	380	-110	-1,090	0
1987	220	-230	-90	-180	780	320	-90	-740	0
	↓	↓	↓	↓	↓	↓	↓	↓	↓
2010	220	-230	-90	-180	780	320	-90	-740	0



INTRAPROVINCIAL MIGRATION

Table 11 below, illustrates the net intraprovincial migration by region for the 8 year period 1979 to 1986.

During this period, population gains from intraprovincial migration were registered by Southeast, Winnipeg and the Interlake. The remaining regions registered losses for this type of migration with the North having the largest loss at -735 persons annually.

TABLE 11: NET INTRAPROVINCIAL MIGRATION BY REGION 1979 TO 1986

REGION	8 YEAR AVERAGE (1979 TO 1986)	DISTRIBUTION OF 8 YEAR AVERAGE (%)	DISTRIBUTION FOR 1986
Southeast	220	8.4%	940
South Central	- 225	- 8.6	- 230
Southwest	- 89	- 3.4	- 10
North Central	- 178	- 6.8	- 310
Winnipeg	773	29.4	440
Interlake	322	12.2	380
Parklands	- 88	- 3.3	- 110
North	- 735	- 27.9	- 1,090
Manitoba	0 *	0 **	0 ***

* Provincial total is 2,631, if sign ignored.

** Percentages based on total of 2,631.

*** Provincial total for 1986 is 3,510, if sign ignored.

As shown in Table 10, the North is projected to have a significant net intraprovincial out flow for the entire projection period at an annual level of -740.

Winnipeg is projected to have a net in flow for the same period of 780 persons per year.

The Interlake and Southeast are also projected to have net in flows at 320 and 220 persons per year.

However, the South Central and North Central are projected to have net out flows of -230 and -180 persons respectively.

The Southwest and Parklands are projected to have minor net out flows at -90 persons each per year.

TABLE 12 PROJECTED REGIONAL TOTAL MIGRATION: 1986 - 2011

DATA SOURCE : MANITOBA BUREAU OF STATISTICS APRIL, 1989

TOTAL MIGRATION

Total migration is the sum of the three migration components as described on the previous pages. Table 12 shows the projected total migration for each region. For migration purposes, the regions appear to fall into two groups.

The first group, consisting of Southeast, Winnipeg and Interlake is projected to have positive total migration to the year 2010.

The Southeast and Interlake are projected to have moderate population growth from total migration. For the Southeast, a low value of 120 for 1986 is projected to increase to 260 by 2010 for a total population gain from migration of 5,380 over the projection period. For the Interlake, slightly higher total migration is projected to result in a population gain from migration of 6,060 over the 25 year period.

Winnipeg is projected to receive the largest population gain with a small loss in 1987 and 1988 changing to an annual gain of 1,880 by 2010. The total population gain from migration for Winnioeg in the next quarter century is projected to be 22,050.

The second group, consisting of the remaining 5 regions is projected to have a migration out flow for the entire period although the extent of the out flow will continue to moderate to the year 2010.

The North will have the largest population loss due to migration with annual out flows projected from -2,000 in 1986 moderating to -1,170 by 2010. The total migration loss for the period is projected to be 37,700.

For the Southwest, a total projected out flow of 12,940 will be the result of a peak out flow of -690 in 1988 decreasing to -310 by 2010.

An out flow of -360 in 1987 dropping to -230 in 2010 will lead to a projected total loss of -7,360 for the North Central region.

The South Central is the fourth region in this group, with a total projected migration loss of -4,250. This will be the result of a 1987 loss of -220 moderating to -140 by 2010.

From a net gain of 40 in 1986, the Parklands is projected to have a net total migration loss of -190 in 1987 which will be halved to -100 by the year 2010. For the entire period, the total population loss to out migration is projected to be 3,210.

APPENDIX E MORTALITY ASSUMPTION

The mortality assumption is expressed as the life expectancy at birth, the number of years one can expect to live after birth.

The life expectancy at birth is calculated from mortality rates (either single year or by 5 year age group) and from the life expectancy at age 90+. The age category 90+ is the oldest category in the life table and has a mortality rate of 1.0 (i.e. no one survives this age category).

TABLE E1: LIFE EXPECTANCY AT AGE 90+ BY REGION 1986 AND 2011

	1986		2011	
REGION	FEMALES	MALES	FEMALES	MALES
Southeast	3.9	2.9	4.6	4.2
South Central	4.2	4.5	4.4	4.6
Southwest	4.1	3.4	4.7	5.1
North Central	5.3	3.3	5.7	4.1
Winnipeg	3.9	3.8	5.8	4.0
Interlake	4.4	3.9	4.5	4.4
Parklands	4.0	3.1	4.9	4.5
North	5.1	3.4	5.5	3.7
Manitoba	4.0	3.6	5.7	4.0

Table 5 (on Page 11) shows the projected life expectancy at birth by region of females and males for the years 1986, 1996 and 2011.

The life expectancies at birth for 1986 were obtained from the Manitoba Bureau of Statistics report "Manitoba Regional Life Expectancies 1985-1987" (MBS 88-4) released in August, 1988. Data sources used in the report were the June 1, 1986 population estimate by sex and age group from Statistics Canada and the number of deaths by age and sex for 1985 to 1987 as reported by the Office of Vital Statistics, Manitoba Community Services.

The Manitoba life expectancies at birth for the year 2011 are from the Manitoba level population projections report released by MBS in March, 1989. These life expectancies (females 83.8 and males 77.5 years) were developed by Statistics Canada in their 1986 - 2011 population projections for Canada and the Provinces.

The regional life expectancies at birth for 2011 by sex were determined by MBS by decreasing the 1986 mortality rates for single years of age in the same proportion that the Manitoba level 1986 survival rates had been decreased to achieve the Manitoba life expectancy at birth for 2011. The values for 1986 and 2011 were then interpolated to 1996.
